1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1, 3-10, and 12-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Ma et al (U.S. Patent 5,953,338).

Regarding to claims 1 and 10, Ma discloses a system (Fig. 2) for managing bandwidth of a remote link comprising a server 140 (col. 7 lines 5-14), a contention pool 145 having a portion of the bandwidth for at least one application group (col. 7 lines 20-26), and a meter 150 for metering the packets belonging to the application group (col. 7 lines 26-38), wherein the server is a VPN server (Fig. 1A col. 5 lines 57-66).

Regarding to claims 3 and 12, Ma discloses a system (Fig. 2) for managing bandwidth of a remote link comprising a server 140 (col. 7 lines 5-14), a contention pool 145 having a portion of the bandwidth for at least one application group (col. 7 lines 20-26), and a meter 150 for metering the packets belonging to the application group (col. 7 lines 26-38), wherein the server is directly connected to other links 302 having larger

Art Unit: 2663

bandwidth than the available bandwidth of the remote links 310-316 (Fig. 3 col. 9 lines 1-13).

Regarding to claims 4 and 13, Ma discloses the packets belonging to the application group (virtual path) share a pre-defined configuration (quality of service), and see col. 11 lines 1-10.

Regarding to claims 5 and 14, Ma discloses a system (Fig. 2) for managing bandwidth of a remote link comprising a server 140 (col. 7 lines 5-14), a contention pool 145 having a portion of the bandwidth for at least one application group (col. 7 lines 20-26), and a meter 150 for metering the packets belonging to the application group (col. 7 lines 26-38), wherein the packets belonging to the application group contend equally for the contention pool (Fig. 4A col. 11 lines 11-26).

Regarding to claims 6 and 15, Ma discloses the meter manages flow rate of the packets going through the server in either direction (Fig. 1B col. 6 lines 5-19).

Regarding to claims 7 and 16, Ma discloses the meter rejects the packets if the flow rate exceeds the assigned portion of the bandwidth (col. 8 lines 1-12).

Regarding to claims 8 and 17, Ma discloses a system (Fig. 2) for managing bandwidth of a remote link comprising a server 140 (col. 7 lines 5-14), a contention pool 145 having a portion of the bandwidth for at least one application group (col. 7 lines 20-26), and a meter 150 for metering the packets belonging to the application group (col. 7 lines 26-38), and a user interface (client) that allows a user to specify the bandwidth of the link (col. 12 lines 1-17).

Art Unit: 2663

Regarding to claims 9 and 18, Ma discloses a system (Fig. 2) for managing bandwidth of a remote link comprising a server 140 (col. 7 lines 5-14), a contention pool 145 having a portion of the bandwidth for at least one application group (col. 7 lines 20-26), and a meter 150 for metering the packets belonging to the application group (col. 7 lines 26-38), and a user interface (client) that allows a user to specify the assigned portion of the bandwidth (col. 10 lines 11-55).
